Introducing HydroRail™ Shower Column

HydroRail (-R) is a simple and affordable way to upgrade a standard shower to a customized KOHLER® shower experience.

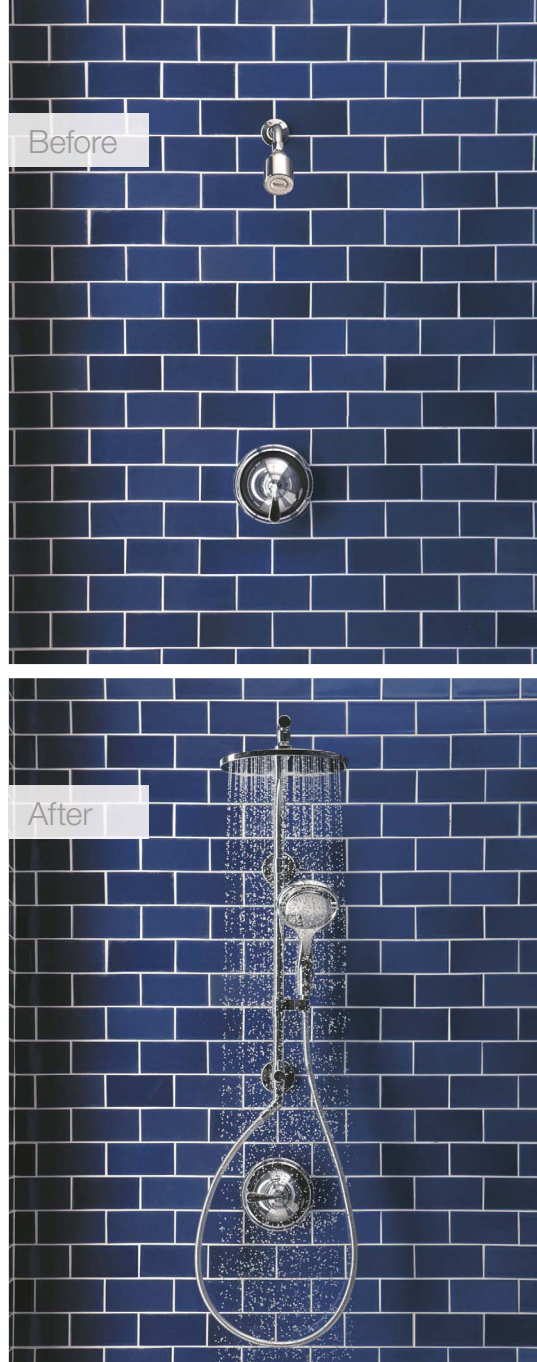

Custom Shower Experience

- Converts a single-outlet showerhead into a two-outlet custom shower.
- The HydroRail (-R) shower column has been designed specifically for use with the following KOHLER rainheads featuring Katalyst® air induction technology to provide a luxurious and authentic spa-like rain showering experience: K-13688, K-13689, K-13692, K-13695.
- The handshower adds utility and function. The adjustable bracket allows for customizing the shower experiences regardless of age, height or gender.
- Because the diverter is conveniently located at the base of the column, it is easy to switch between the rainhead and handshower experience.

Simple and Affordable

- The HydroRail (-R) shower column allows you to customize a shower without the price tag of a full remodel.
- The column installs without altering in-wall plumbing.
- Available for both bath/shower and shower-only installations.
- The HydroRail (-R) shower column includes a column, bracket, hose, slide bar and diverter. The purchaser has the flexibility to add a handshower and one of the specified rainheads to complete the system.

Proper measurement is required to ensure the correct column is chosen for any given bath/shower or shower-only configuration. For complete measurement information, visit KOHLER.com/HydroRail.

HydroRail video.**

Existing plumbing should be in good condition and firmly fixed in place for the HydroRail™ (-R) shower column to function properly.

HydroRail™ Shower Column

System Configurations

Finish Options

(-CP)

(-BN)

HydroRail (-R) was designed to accommodate a wide array of bath/shower or shower-only configurations and is suitable for remodeling applications and new construction.

Easy Installation

- In a remodeling application, the HydroRail (-R) shower column replaces an existing showerarm, connecting to the ½-inch NPT supply elbow inside the wall cavity.
- The HydroRail (-R) shower column requires that the existing pipework is in good condition and firmly fixed in place.

Follow a simple inspection and measurement process to choose the best configuration for you. Complete measurement details, along with an easy-to-follow site evaluation survey can be found at KOHLER.com/HydroRail.
